

# GENERATION ASSET MONITOR™

Generation Asset Monitor™ (GAM) tracks the interconnection queues in PJM, NYISO, ISO-NE and MISO.

**PRODUCT BROCHURE**

# GENERATION ASSET MONITOR™ (GAM)

## Tracking new project development & upcoming retirements

**Generation Asset Monitor™** provides an outlook for the development timeline of new generation projects and plant retirements in ISO-NE, NYISO, PJM & MISO. For each project, ESAI assigns a “probability of completion factor in percentage terms” that is then applied to develop a forward assessment of likely capacity additions and retirements in each pool. The **GAM** is available as part of ESAI’s **Quarterly Power** and **Whole View** Services.

### Generation Asset Monitor™ Provides:

- Forward assessment of likely capacity additions in PJM, NYISO, ISO-NE and MISO.
- Details on all announced retirements and projections on all units at-risk of retirement.
- GAM Database is published monthly and provides a summary overview of significant changes from the previous month.
- For each RTO, ESAI provides project by project level details such as project status, queue numbers, project name, developer permit status, financing status, PPA status, and projected online date.
- GAM has regional detailed estimates for renewable energy asset additions, fossil additions, and projects at-risk of retirement by year for each RTO.

### Who is the Generation Asset Monitor™ Audience?

- ESAI works with investors, developers, generation owners and operators to navigate the complex power and renewables markets and to understand the potential impacts of changing market conditions on forward capacity and power prices.

### Quarterly Power Service Access

- Quarterly Power Service subscribers also gain access to ESAI’s Capacity Watch, Energy Watch, Renewables Watch, Emissions Watch and Transmission Watch coverage.
- QPS provides 10-year forward curves for ISO-NE, NYISO, & PJM.
- Clients can also request access to our MISO Capacity Market Service, launched in 2022.
